1 Subjective Questions:	1
2 Objective Questions:	2
3 Design DFA	2
4 Design NFA	3
5 More Practice Questions	3
5.1 More simple/fun Questions	3

1 Subjective Questions:

1. Define the following terms:
 - a) Automaton
 - b) Alphabet
 - c) String
 - d) Language
2. Given an alphabet $\Sigma = \{a, b\}$, list some valid strings over Σ .
3. Explain why we need a simpler way of discussing computing machines.
4. Describe the concept of an automaton and its role as a mathematical model of a computing device.
5. What are the reasons for building models in computing? Explain the significance of finite automata as abstractions of computers.

6. Define an alphabet and a string over an alphabet Σ . Provide examples.
7. Given an alphabet $\Sigma = \{a, b, c\}$, list some valid strings in the language of palindromes over Σ .

2 Objective Questions:

1. Define an NFA and explain how it differs from a DFA in terms of determinism.
2. Define the formal structure of a DFA and NFA (hint: look at the 5 tuple structure I discussed in the lecture).

3 Design DFA

Q1. What language is accepted by the following DFA?

Q2. What language is accepted by the following NFA?

- Q3. Construct a DFA that accepts binary strings of any length, except 3.
- Q4. Let $\Sigma = \{a, b\}$ and let $L = \{baa\}$. Design a DFA for L .
- Q5. Let $\Sigma = \{a, b\}$ and let $L = \{w \in \Sigma^* \mid w \text{ is non-empty and the first and last character of } w \text{ are the same}\}$. Design a DFA for L .
- Q6. Let $\Sigma = \{a, b\}$ and let $L = \{w \in \Sigma^* \mid w \text{ is a nonempty string whose characters alternate between a's and b's}\}$. Design a DFA whose language is L .

4 Design NFA

Q7. Let $\Sigma = \{a, b, c\}$ and let $L = \{ w \in \Sigma^* \mid w \text{ ends in } cab \}$. Design an NFA for L .

Q8. Let $\Sigma = \{a, b, c\}$ and let $L = \{ w \in \Sigma^* \mid \text{some character in } \Sigma \text{ appears at most twice in } w \}$. Design an NFA for L .

Q9. Let $\Sigma = \{a, b\}$ and let $L = \{ w \in \Sigma^* \mid \text{the third-from-last character of } w \text{ is } a \}$. Design an NFA for L . Your NFA should use at most four states.

5 More Practice Questions

Q10. Give NFAs with the specified number of states recognizing each of the following languages. In all cases, the alphabet is $\Sigma = \{0, 1\}$.

- Q10.1. The language $\{ w \in \Sigma^* \mid w \text{ ends with } 00 \}$ with three states.
- Q10.2. The language $\{ w \in \Sigma^* \mid w \text{ contains the substring } 0101, \text{ i.e., } w = x0101y \text{ for some } x, y \in \Sigma^* \}$ with five states.
- Q10.3. The language $\{ w \in \Sigma^* \mid w \text{ contains at least two } 0\text{s, or exactly two } 1\text{s} \}$ with six states.
- Q10.4. The language $\{ \}$ with one state.

5.1 More simple/fun Questions

Warning

Important: I will give you solutions to these questions but they will be slightly wrong, you need to figure out what is wrong and fix that ¹.

1. **Heat Wave in The Netherlands:** Design a DFA to determine if a heat wave has occurred in The Netherlands (the definition of a heatwave is that the temperature should be greater than 25°C for 5 days straight).

$L = \{ w \in \{ \leq 25, > 25 \}^* \mid w \text{ contains at least five consecutive } > 25 \}$

2. **Password Strength:** Design a DFA that accepts passwords that are at least 3 characters long, contain at least one uppercase letter, one lowercase letter, and one digit.

¹Trust me this is better than having no solutions!

$L = \{ w \text{ in } \{a-z, A-Z, 0-9\}^* \mid w \text{ \{ contains at least one uppercase, one lowercase, one digit, and has length } \geq 3 \} \}$

3. **Elevator Button Presses:** Design an NFA where the elevator goes to the 5th floor only if the 2nd and 4th-floor buttons are pressed consecutively.

$L = \{ w \text{ in } \{1,2,3,4,5\}^* \mid w \text{ \{ contains 2 followed by 4 \} } \}$

4. **Traffic Light Sequence:** Design a DFA that represents the sequence of traffic lights (Red \rightarrow Green \rightarrow Yellow \rightarrow Red).

$L = \{ w \text{ in } \{R, G, Y\}^* \mid w \text{ \{ follows the pattern \} RGY } \}$

5. **Coffee Machine:** Design a DFA that accepts sequences where a user selects a coffee type, adds sugar (optional), and then presses the start button.

$L = \{ w \text{ in } \{\text{coffee, sugar, start}\}^* \mid w \text{ \{ starts with coffee and ends with start \} } \}$

6. **Library Book Return:** Design an NFA that accepts if a book is returned either on or before its due date or within two days after its due date.

$L = \{ w \text{ in } \{\text{on-time, late}\}^* \mid w \text{ \{ is either on-time or late up to two days \} } \}$

7. **ATM Transactions:** Design a DFA that accepts sequences where a user inserts a card, enters a PIN, selects an account, chooses a transaction type, and then takes the cash or completes the transaction.

$L = \{ w \text{ in } \{\text{card, PIN, account, transaction, cash}\}^* \mid w \text{ \{ starts with card and ends with cash or transaction \} } \}$

8. **Music Playlist Shuffle:** Design a DFA that shuffles songs without repeating the same song until all songs in the playlist have been played.

$L = \{ w \text{ in } \{\text{song_1, song_2, ... song_n}\}^* \mid w \text{ \{ does not repeat any song until all songs have been played \} } \}$
